

X-BAR | STRIKER

The Simplicity Striker is a Walking Beam ground following planter unit, which includes a straight 16" front coulters on gauge wheels to control the coulters depth.

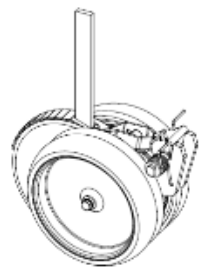

The coulters opens the soil for a narrow tine using an Inverted T point. This opens and lightly tills the seed bed, which accurately delivers seed/fert into moisture (capable of seed depths from 5mm to 130mm).

This is followed by the integrated Press Wheel assembly, to close the seed bed. This planter system includes a hydraulic down force system to apply a consistent (no recoil) down force.

This complete unit is connected to an X-Bar tool bar system, which is a shaped tool bar that allows the Striker unit to clamp onto the bar and caters for easy movement with NO u-bolts.

ADDITIONAL OPTIONS:

- Dual Finger Wheels
- Dual Press Wheels
- Double Disc Opener
- Dual Closing Wheel
